Projects

Title: Fingerprint voting system

Domain: **Web Application**

The Fingerprint Voting System is a secure and efficient biometric-based voting system that replaces traditional voting methods with fingerprint authentication. This system ensures that only registered voters can cast their votes, preventing fraud and duplication. It uses a fingerprint scanner to verify voter identity, a database to store registered fingerprints, and a user-friendly interface for voting. The project enhances election security, speeds up the voting process, and provides accurate results with minimal human intervention.
